SYNEX CYBERPUNK AI SCAM DEFENSE CHEAT SHEET

Awareness | Empowerment | Protection

1. IMMEDIATE ACTION WHEN YOU'VE BEEN SCAMMED

- Disconnect logout of all accounts involved.
- Change all passwords immediately.
- Screenshot and store every message or wallet ID.
- Report to your bank, exchange, or cyber-crime unit.
- Warn your contacts to prevent further spread.

---

2. VERIFY BEFORE YOU TRUST

- Check official domains and verified socials
- Never trust "recovery agents." - Scam
- AI or "investment bot" promising 10× returns = red flag.
- Verify on credible cyber-security sites.

---

3. KNOWLEDGE = DEFENSE

- Learn aboutdeepfakesand AI-generated scams.
- Use ScamAdviser or Who is to check legitimacy.
- Follow SyneX Cyberpunk community for alerts.

---

4. RECOVERY BASICS

- Filea fraud report and obtain a case number.
- Freeze your credit if your data was leaked.
- Notify contacts to block future scams.

---

5. JOIN THE NETWORK

- Join the SyneX Cyberpunk community for new AI tools, scam defense, and survival guides.
- Exclusive drops every Monday.

AI Survival Guide

Awareness | Empowerment | Protection

Immediate Checks (Do these in the moment)

Random Phrase Test (3 sec): Ask for two random words or a short sentence. Human speakers answer naturally; voice-clones may stutter, delay, or produce clipped audio.

Real-time Physical Check: Ask for a physical action (hold up a hand, draw a smiley, move camera left/right). AI/video forgeries often fail at unpredictable physical cues.

Verify Secondary Channel: Hang up and call a known number or message via a verified account (don't use contact info given in the suspicious call).

Ask for Identifiable Detail: Ask a question only the real person would know (not easily found online) — but avoid private info that could be sensitive.

Quick Evidence Checks (if you receive aud/vid file)

Reverse Image Search: Screenshot the video thumbnail or headshot and reverse-image search (Google Images, TinEye) to find reused footage.

Check Visual Signs of Deepfake: Look for unnatural blinking, jitter around the face, mismatched lighting, warped backgrounds or inconsistent lip-sync.

Check Audio Signs: Listen for unnatural breaths, robotic cadence, odd background hums, or mismatch between mouth movement and audio.

Run a Detector Scan: Upload audio/video to a reputable detector (free trials available):
Resemble Detect (audio deepfake checks).
Reality Defender / Reality Defender API (50 free scans/month).
Other detectors: Deepware, Arya AI — use multiple checks if unsure.

Account & Privacy Hardening (60-second setup)

Enable 2FA on all financial and email accounts (use an authenticator app, not SMS where possible).

Revoke app mic & camera permissions: Go to Settings → Apps → Permissions → Revoke mic/camera for unknown/untrusted apps.

Turn off ad tracking & microphone access for nonessential apps.

Update devices & browsers (security / OS updates patch known exploit vectors).

Avoid posting long, clear voice clips publicly (mix background audio or post tiny voice clips only). Public audio increases cloning risk.

AI Survival Guide

Fast checks to spot voice & video deepfakes + quick privacy steps

Business / Professional Safeguards

Training: Implement a “challenge verification” process for money transfers—always require two independent approvals and verify in person/phone. (Case studies show single-channel approvals lead to large transfers.)

Policy: Add protocols to refuse action on urgent voice/video requests without secondary verification (e.g., “No transfer without signed email + manager signoff”).

Employee drills: Run simulated deepfake vishing exercises; teach employees phrase tests and real-time checks.

If You’ve Been Targeted (Emergency steps)

1. Stop communication with the suspected fraudster.

2. Contact your bank and halt any pending transfers immediately.

3. Record & save all evidence (audio file, screenshots, timestamps, phone numbers).

4. File a report with local police and relevant cybercrime unit; report to the platform used (WhatsApp, YouTube, etc.).

5. Change passwords & enable 2FA for accounts accessed around the event.

6. Inform clients/confidants who may be targeted using your voice/identity.

Fast Tools & Resources (trusted starts)

Resemble Detect — audio deepfake checks (free demo).
Reality Defender — image/audio detection API and free scans.
Reverse image search: Google Images, TinEye.
Reporting resources: Local police cyber unit, FTC identity fraud pages (US), platform abuse/report forms.

Conversation Fuel (3 quick facts for clients / small talk)

Fact 1: “A convincing voice clone can be made from under a minute of audio.” (use this as a lead)

Fact 2: “The simplest defense is human unpredictability — random phrases or live actions often expose forgeries.”

Fact 3: “Always verify money requests through an independent channel — phone or face-to-face.”
